Types Of Water Filters

Many people are starting to become concerned by what is in their drinking water. Water filters and filtration systems are becoming popular in homes across the country. Safety is one concern, but taste is another that water filters address. Contaminants are the cause of particles or bad taste. Testing your water for contaminants is the first step. If contaminants are found you can then look into a water filter.The type of water filter you chose will be based upon a few factors. If you own your home you can pretty much install any water filter you chose, but if you do not own your home then you are limited to water filters that are non-evasive or easily removed. Costs also vary from under $100 Reliable Standard Heating & Air Scripps Mira Mesa to over $1000. The amount of filtration also varied from filter to filter. To start with you should familiarize yourself with the types of water filters available.Whole house filters are set up Heating & Air Mira Mesa through the main water line that comes into the house. This type of water filter removes contaminants from all the water entering your home. A whole house system is good for removing particles like rust and sediment.Under sink filters come in a variety of styles. There are filters that take multiple cartridges or only one. Each type of under sink filter is designed to remove different contaminants. Some may only remove particles while others may have additional cartridges to remove odors and taste problems. These can be bought according to the particular needs based on the contaminants in your water. They only filter water going to the area where the filter is installed.Faucet-mounted filters are easy to install and remove. It only filter the water coming out of the faucet where it is installed. There is not mounting required as most simply screw onto the faucet. These types of filters also come in a variety that can be chosen based upon what contaminants are in your water.Canister filters are the simplest form of water filter. These filters are basically just a pitcher with a filtration system in the lid. Water is poured in, goes through the filter to the reserve tank (pitcher bottom) and then can be drank. The only water filtered is what is put in the pitcher.These are the basic types of water filters. Your needs and the contaminants in your water will help you decide which water filter will work best for you.
