Advantages Of Pre Engineered Wood Flooring

For starters, engineered wood flooring tends to be stronger than regular solid hardwood flooring. It can also be installed over just about anything – concrete slab, existing wood floors, ceramic tile, etc. This certainly makes it attractive to someone looking to put in a wood floor with as little trouble as possible.New advances have made it possible to put real wood as the top layer of each engineered plank. This makes engineered flooring almost indistinguishable from traditional solid wood flooring. This also means less wood is required for each plank. And even better, the finishes used by the factory are generally more durable than a finish you would apply yourself if you were installing solid plank flooring.Since the finishes are applied at the factory, that means you can avoid all the mess, extra time and vapors associated with applying your own finish. You also don't have to worry about sanding or taping plastic sheets up all over your house. With engineered wood flooring, you can walk on it as soon as it is installed. There is no waiting period, it's instant gratification. And you don't have to stain it!The factory also puts multiple coats of finish on each wood plank which dries to a much harder protective layer than a finish you would apply yourself. This added protection means less maintenance for you over the years. It also means engineered floors are more scratch resistant than solid flooring. If you have *Have a peek at this website* kids or pets, engineered wood flooring is likely your best investment. It will save you time up front and over the life of the floor.Engineered flooring offers strength, ease of use, and looks that rival solid wood flooring. In many cases the cost of engineered flooring is comparable to that of real plank wood. You can't ask for anything better.
