The Mathematics Behind Mines: Provably Fair Gaming

A lot of trusted online casinos that include Mines use **Provably Fair** technology. This is a cryptographic algorithm that enables gamers to validate the fairness of every game round independently.

- **Server Seed & & Client Seed:** Before a game starts, the casino generates a hashed version of a secret server seed. The player's web browser also creates a client seed.
- **The Outcome:** The mix of these 2 seeds identifies the specific placement of the mines on the grid.
- **Confirmation:** After the round concludes, the server seed is revealed, enabling the player to input the data into a third-party verifier to make sure the casino did not modify the placement of the mines mid-game.

This openness has actually made Mines exceptionally popular in the crypto-casino sector, where trust and verifiable randomness are critical.
