- **Scissors** cuts Paper.
- **Paper** covers Rock.

In a gaming context, players put financial bets-- either versus each other (peer-to-peer) or against your home-- before tossing their hand. The winner takes the pot or receives a payout based on established odds.

While it sounds deceptively simple, the intro of cash modifications everything. It elevates the psychological pressure, requiring participants to look deep into their challenger's eyes, analyze previous patterns, and master the art of deceptiveness.

### Understanding the Math and Odds

Choice Likelihood of Throwing Outcome vs. Random Opponent **Rock** 33.33% Win vs. Scissors, Lose vs. Paper, Tie vs. Rock **Paper** 33.33% Win vs. Rock, Lose vs. Scissors, Tie vs. Paper **Scissors** 33.33% Win vs. Paper, Lose vs. Rock, Tie vs. Scissors

Nevertheless, people are infamously bad at being really random. This human aspect is precisely where benefit gamers and casinos find their edge.

Rather, they normally change to the gesture that *would have beaten* what simply defeated them. For instance, if a gamer loses with Paper to Scissors, their next instinct is frequently to toss Rock.
