Window Blinds Different Kind Of Blinds

Window blinds have been in usage for long time now covering windows preventing entry of light. The historic evolution of blinds are not very clear, but there are theories that blinds were first designed and used in Venice if one were to go by the popular blind type.People have been using window blinds for privacy also in addition to light preventing Sun light and eventually heat in summer. Although there are many types of window blinds, one which is a hit with every one is the Venetian blinds.Varieties of Window BlindsWhen we distinguish blinds according to their making, we can differentiate door and window blinds just by their respective sizes. The different kinds of blinds are as follows.At the top are Venetian blinds because of their popularity. The slats of the blinds are made of plastic or metal. Wooden slats and bamboo slats are not unusual and they are known by their respective names only. For example wooden blinds and bamboo blinds. The usual width of slats is 50 mm but you can **air duct & dryer vent cleaning** occasionally find someone using blinds of upto 120 mm width too. One window on a wide wall having 120 mm slats add to the aesthetics of the room. Venetian blinds have a couple of equally popular variants too.1. Mini blinds; here the slats are pretty narrow and you cant expect it to be wider than 19 mm.2. Vertical blinds; slats are vertical here thus giving it the name. Additionally, you can find the slats made of stiffen fabric. It is possible to turn the slats by 90 degrees when they hang from their ends from a guide rail.Slat type window blinds open by turning in place which is facilitated by turning rotator attachments connected to strings.There are special types in window blinds, such as solid blinds referring to those which can be opened by pulling up or by pushing up only. These cant be opened in place as they are made of one solid sheet material. Examples of these are here.Holland Blinds: One most common Holland blind type is woven wood blind, woven by simple strings so that they can just roll up or fold up to open. These are preferred in tropical conditions because of their higher efficiency in Sun control. The natural appearance gives an exquisite feel and gels totally with the ambience.Pleated Blinds: Stiffened fabric made blinds just pull-up to open and when pulled up they fit the recess at the top.Honeycomb Blinds: You can call these as cellular shades also because of their two or more layered cellular construction. These provide better insulation thanks to their cellular design.
