The objective is easy: **squander before the multiplier "crashes."**

If a player successfully cashes out at 2.50 x, they get their initial stake increased by 2.50. However, if the crash happens before they hit the cash-out button, the bet is lost entirely. 2. **The Ascent:** Once the betting window closes, the multiplier begins at 1.00 x and begins ticking upward in real time.
3. **The Decision:** Players must choose whether to squander early for a modest, safe revenue or hold on for a larger payment, running the risk of a total loss.
4. **The Crash:** At a totally random moment, the multiplier stops growing. The round ends, and all gamers who failed to squander lose their bets.
