What is a CSGO Crash Site?

At its core, a "Crash" video game is a fast-paced, high-risk, high-reward wagering format. Inspired by financial trading charts, the video game features a multiplier that starts at 1.00 x and quickly climbs up upward up until it arbitrarily "crashes."

The goal for the player is easy in theory, yet painful in practice: place a stake (utilizing real cash, cryptocurrency, or CSGO skins), view the multiplier rise, and hit the "Cash Out" button before the multiplier crashes. If the player cashes out [CSGO crash skins](#) in time, they win their stake increased by the current number. If the crash happens before they cash out, they lose their stake completely.

The Basic Mechanics of Crash

1. **The Betting Phase:** Players have a brief window (generally 5 to 10 seconds) to position their bets and optionally set an "auto-cashout" multiplier.
2. **The Ascent:** Once the betting phase closes, the round starts. A graph or an animated object (often a rocket, jet, or terrorist character) takes off, and the multiplier ticks up in real-time.
3. **The Crash:** The round ends quickly when the system triggers a crash. This can occur anywhere-- even instantly at 1.00 x (often referred to as an "immediate bust"), or it can skyrocket previous 100x, 500x, or higher.
