## What is the Limbo Crypto Game?

Limbo is a crash-style casino game, though it varies a little from traditional crash video games where a multiplier line increases continuously up until it crashes. Rather, Limbo is a target-multiplier game.

When a player opens a Limbo game, they configure 2 primary specifications:

1. **The Bet Amount:** How much cryptocurrency they wish to wager on the round.
2. **The Target Multiplier:** The payment multiplier they wish to achieve (e.g., 2x, 10x, 100x, and even up to 1,000,000 x).

Once these are set, the gamer initiates the round. The game generates a random number. If the created number is **greater than or equivalent to** the target multiplier, the gamer wins their bet increased by that target. If the produced number fails, the bet is lost.

## How Limbo Works: The Mechanics Behind the Bets

To understand why Limbo is so popular in the crypto gambling neighborhood, one need to look at its core engine: **Provably Fair algorithms**.

Unlike traditional online gambling establishments where game outcomes are determined on a black-box server, crypto-native video games use cryptographic hashing (typically using SHA-256). Before a bet is placed, the casino generates a hashed variation of the winning result. After the round concludes, players can verify the mathematics to guarantee the gambling establishment did not manipulate the outcome.
