Instead of opening cases in isolation, numerous participants-- normally in between 2 and four players-- pool their resources to buy a particular set of virtual cases. Once the room is set, the system at the same time opens the designated cases for all individuals round by round.

The objective is basic: accumulate the highest overall financial or rarity worth by the end of the battle. The gamer with the highest general worth wins the contents of all the opened cases, while the losers leave empty-handed.

4. **The Opening Phase:** Once all slots are filled, the battle starts. Virtual cases spin automatically on the screen, exposing items item-by-item across multiple rounds.
5. **Figuring out the Winner:** At the final round, the platform totals the market value of all products pulled by each individual. The highest overall worth protects the whole reward pool.
