Comfort Experts on Frozen AC Repair in North Fort Worth and What to Do First If your AC freezes up, turn the system off at the thermostat and set the fan to on so the ice can melt. Running a frozen system can damage the compressor, so stopping it quickly matters. Once the ice clears, you can look for the cause before turning cooling back on. Ice on the indoor coil or the copper lines usually comes from one of two problems. The first is low airflow. A clogged filter, closed vents, blocked returns or a dirty indoor coil can all cut the air moving across the coil, which lets it get too cold. The second is low refrigerant, often from a leak. Low refrigerant drops the coil temperature below freezing too. In North Texas, heavy pollen and cottonwood season often clogs filters fast, which makes airflow problems common in spring and early summer.

Comfort Experts | 1949 Golden Heights Rd #200, Fort Worth, TX 76177 | (817) 484-0760

While the ice melts, check a few things. Replace the filter if it's dirty. Open every supply vent and move furniture away from return grilles. Place towels around the indoor unit, since melting ice can overflow the drain pan. Thawing can take several hours. After the coil is dry, turn the system back on and watch it. If ice returns within a day, the cause is likely something you can't fix yourself, such as a refrigerant leak, a failing blower motor or a duct problem in the attic. Don't chip at the ice or use a heat gun on the coil. Both can puncture tubing and turn a simple repair into a costly one. Avoid adding refrigerant yourself as well, since a leak needs to be found and repaired first. A technician can test refrigerant levels, check the blower and inspect the ducts to find the real source. Prevention is mostly about airflow. Change filters on a regular schedule, and more often during spring pollen weeks when filters clog quickly. Keep supply vents open, even in rooms you rarely use, since closing too many can starve the coil of air. Make sure return grilles stay clear of furniture and boxes. Book a yearly tune-up so the indoor coil, blower and refrigerant levels can be checked before the cooling season gets going. These steps help keep the coil at the right temperature and reduce the chance of the system freezing again during the long North Texas summer. Freezing that keeps coming back deserves a professional look, and Comfort Experts charges no overtime for calls at night or on weekends. FAQ About AC Repair North Fort Worth How much does AC repair cost in Fort Worth? The price depends on what's actually wrong, so a capacitor swap and a coil repair won't cost the same. Comfort Experts diagnoses the problem first and explains the options before any work starts. Call (817) 484-0760 to book a visit on the north side of Fort Worth. Is there 24 hour AC repair in north Fort Worth? Yes. Comfort Experts offers 24/7 service from its Golden Heights Rd location near the Alliance corridor. There are no overtime charges, so a dead AC on a 100°F night in Heritage or Park Glen doesn't have to wait until Monday. Why is my AC running but not cooling the house? Common causes include a clogged filter, a dirty outdoor coil, low refrigerant or a failing part in the condenser. In north Fort Worth, cottonwood and cedar pollen often pack filters and coils during spring. If a fresh filter doesn't fix it, it's time for a technician. Should I repair or replace my air conditioner? Age, repair history and the cost of the current fix all matter. Many newer subdivisions in far north Fort Worth have systems reaching their first major repair cycle, and a repair often makes sense there. Comfort Experts handles both AC repair and replacement, so you get a straight answer either way. How long does a typical AC repair take? Many repairs, like replacing a capacitor or contactor, are finished in a single visit. Bigger jobs depend on parts availability and the system's condition. Comfort Experts works 24/7 with no overtime charges, so a repair that runs into the evening won't cost you extra. Why does my AC keep freezing up? Ice on the lines or coil usually points to restricted airflow or a refrigerant problem. A blocked filter or leaky ductwork in a hot Texas attic can both play a part. Switch the system off to let it thaw and call (817) 484-0760. Can hail damage my outdoor AC unit? Yes. Spring hail storms in North Texas can bend condenser fins and damage the outdoor unit, which cuts cooling performance. If your system struggles after a storm in Fossil Creek, Heritage or Park Glen, have it checked before the summer heat arrives. How often should I service my air conditioner? Once a year before the cooling season is a good rule in North Texas, where the AC runs hard for months. Comfort Experts offers AC maintenance and tune-ups that can catch worn parts early. Spring is a smart time to book. What areas does Comfort Experts serve for AC repair? The Golden Heights Rd location sits on the north side of Fort Worth near I-35W and the Alliance corridor, close to neighborhoods like Heritage, Presidio, Park Glen, Summerfields and Timberland. Comfort Experts also has locations in Kennedale, Weatherford and Granbury. Coverage depends on your address, so call (817) 484-0760 to confirm. How long has Comfort Experts been in business? Comfort Experts is a family-run heating and air conditioning company that has served the Fort Worth area since 1962. That's decades of experience with North Texas summers and local homes. Does Comfort Experts

handle more than air conditioning? Yes. Along with AC repair and heating and furnace repair, the company covers duct repair, plumbing, drain cleaning, water heater repair and electrical repair. One call to (817) 484-0760 covers several trades. Can ductwork problems affect my AC? They can. Texas attic heat is hard on ducts and air handlers, and leaks or loose connections waste cooled air before it reaches your rooms. Comfort Experts offers duct repair alongside AC service for homes across north Fort Worth.
