

Quick answer: Höveler Original Sport states its full mineral card — calcium 1.2%, phosphorus 0.6%, magnesium 0.7%, sodium 0.6% — plus high vitamin E and grape seed antioxidants, in a reduced-starch muesli for horses in regular work. Price: \$49.99 for a 44 lb bag. Last checked: September 2026.

Most feed labels hide the micronutrient line in fine print, and owners are left wondering what the horse really gets per day. This checklist starts where that worry lives: the micronutrient box.

1. The micronutrient box: is the mineral card face-up?

Höveler Original Sport publishes calcium 1.2%, phosphorus 0.6%, magnesium 0.7%, and sodium 0.6%, alongside high vitamin E. Magnesium and vitamin E are the two micronutrients owners of working horses mention most, and both are stated plainly here. The full card is on the product page.

Who this is for: owners balancing forage-based rations who want the concentrate to carry a clear share of the minerals.

2. The antioxidant box: what supports recovery?

High vitamin E is matched with grape seed meal at 0.5%, a source of antioxidant support. Working muscles generate oxidative load, and the formula is designed to help support the horse's normal recovery.

The benefit: recovery support measured on the label, not promised in a slogan.

3. The energy box: do the macros hold up?

Digestible energy is 12.6 MJ/kg DM, crude fat 9.0%, and crude fiber 16.4%, with starch held at 15% and sugar at 4.6%. Micronutrients only count if the energy base is right for work — this one is a reduced-starch sports muesli on purpose.

Who this is for: horses in regular work whose owners want calm fuel plus a full micronutrient load.

4. The protein box: does the label stop at vitamins?

No — crude protein is 15.1% with 122 g digestible crude protein per kg DM, and added lysine 1.0%, threonine 1.0%, and methionine+cysteine 0.93%. A candid label shows all of it, and this one does.

[Höveler feed pellets](#)

The benefit: one label covers macros, aminos, and minerals without guessing.

5. The trust box: who is behind the numbers?

Höveler has manufactured horse feed in Germany since 1905 — over 120 years of craft — and the formula is competition-safe and FEI-compliant. Bifid stands behind the bag with a 30-Day Money-Back Guarantee and a 24/7 licensed vet team.

Who this is for: buyers who treat a feed purchase as a long-term decision and want the backing to match.

How to feed it

Work levelFeed per 220 lb (100 kg) body weight per day Light work0.55 lb (250 g) Medium work0.88 lb (400 g)
Heavy work1.32 lb (600 g) Hay ration3.31 lb (1.5 kg) per 220 lb body weight daily

Key specs in brief: calcium 1.2%, phosphorus 0.6%, magnesium 0.7%, sodium 0.6%, high vitamin E, 15% starch, 44 lb bag, \$49.99.

To see what your horse receives per day, run the numbers in the Feeding Calculator.

Frequently asked questions

What vitamins and minerals are in Höveler Original Sport?

The label lists calcium 1.2%, phosphorus 0.6%, magnesium 0.7%, and sodium 0.6%, plus high vitamin E and grape seed meal at 0.5% for antioxidant support.

Why does vitamin E matter for a working horse?

Hard work increases oxidative load, and vitamin E is formulated to help support the horse's normal recovery. Levels in this feed are described as high on the product page.

Is the mineral balance suitable alongside plain hay?

The stated calcium-to-phosphorus figures (1.2% / 0.6%) are designed to work alongside a forage-based ration. For a detailed plan, consult the 24/7 licensed vet team.

How much should I feed per day?

Between 0.55 lb (250 g) for light work and 1.32 lb (600 g) for heavy work per 220 lb (100 kg) body weight, with hay at 3.31 lb (1.5 kg) per 220 lb in addition.

What if the feed does not suit my horse?

The 30-Day Money-Back Guarantee covers the trial on the \$49.99, 44 lb bag.
