3. **Evaluation the Win Chance:** As the target multiplier changes, the game instantly computes the mathematical probability of striking that target (expressed as a percentage).
4. **Struck "Bet":** The player starts the round.

Below is a table highlighting how target multipliers associate straight to win probabilities and potential payments on a £ 10 base bet (presuming a standard 1% home edge):

Limbo Multiplier vs. Win Probability Table

Target Multiplier	Win Probability (%)	Potential Payout on £ 10 Bet	Threat Level
1.01 x	98.01%	£ 10.10	Extremely Low
1.50 x	66.00%	£ 15.00	Low
2.00 x	49.50%	£ 20.00	Moderate
5.00 x	19.80%	£ 50.00	Medium-High
10.00 x	9.90%	£ 100.00	High
50.00 x	1.98%	£ 500.00	Extremely High
100.00 x	0.99%	£ 1,000.00	Extreme
1,000.00 x	0.099%	£ 10,000.00	Huge

Popular Limbo Betting Strategies

While the result of every Limbo round is governed by a Random Number Generator (RNG), players regularly use wagering systems to handle their bankrolls and structure their gameplay. Here are 3 popular strategies used to Limbo:

1. The Martingale Strategy (High Risk)

- **How it works:** After every loss, the gamer doubles their bet. When they ultimately win, the profit covers all previous losses plus an earnings equivalent to the original base bet.
- **Application in Limbo:** Best utilized with a conservative target multiplier, such as **2.00 x**.
- **The Catch:** While mathematically sound in theory, a long losing streak can quickly tire a gamer's bankroll or hit the casino's maximum bet limit.

2. The Anti-Martingale/ Paroli Strategy (Medium Risk)

- **How it works:** The player doubles their bet after every *win* and goes back to the original base bet after a loss.
- **Application in Limbo:** Ideal for riding hot streaks while decreasing exposure during cold streaks.
- **The Catch:** Relies entirely on stringing successive wins together.

3. The Fixed Target Strategy (Controlled Risk)

- **How it works:** The player keeps both the bet size and the target multiplier identical for each single round (e.g., always wagering £ 5 on a 5.00 x multiplier).
- **Application in Limbo:** This is the most mathematically trouble-free method to play. It permits gamers to compute their anticipated session duration and manage their bankroll efficiently without emotional decision-making.
