

## A London Professional's Account of Stopping Smoking in a Single Session

A finance professional working near Fitzrovia had smoked for close to fifteen years by the time he booked a stop smoking hypnotherapy in london session with Hypnotherapy 4 Freedom, having previously tried nicotine patches twice and an app based tracking method once, none of which had lasted longer than a few weeks before the habit crept back in during a particularly stressful stretch at work.

What drew him to try hypnotherapy specifically, after two failed attempts with more conventional methods, was the promise of addressing the habit itself rather than gradually reducing nicotine intake while leaving the underlying behaviour pattern untouched. During the free consultation call, he described his smoking as almost entirely tied to work stress, a cigarette during a tense phone call, another during a short break between back to back meetings, rarely smoked for enjoyment on its own outside of these specific triggers. The session itself, booked during a quieter period at work rather than his usual lunch break, focused on breaking the automatic link between work related stress and reaching for a cigarette, using clinical hypnotherapy combined with NLP techniques aimed at interrupting that pattern directly. He has described the experience afterward as feeling less like he had forced himself to quit and more like the urge itself had simply become quieter, no longer an automatic reflex triggered by the same old situations. Several months on, he reports having stopped smoking entirely following that single session, something he says surprised him more than anyone else, having genuinely doubted beforehand that one session could achieve what two previous, more gradual attempts had failed to manage. He has since recommended the clinic to two colleagues dealing with similar work related smoking habits. His account illustrates why stop smoking is treated somewhat differently from other services offered by a hypnotherapist in london, a single, focused session working directly on an automatic behavioural pattern, rather than a longer course addressing something more layered or gradually developed over time. As with all client accounts shared here, identifying details have been adjusted to protect privacy, while the substance of the experience, the previous failed attempts, the specific work related trigger, and the single session outcome, reflects the kind of work genuinely carried out at the Harley Street clinic for clients in similar situations. Not every client achieves this result from a single session, and realistic expectations are always set during the free consultation call [hypnotherapy sessions in London](#) rather than promising a guaranteed outcome regardless of individual circumstances. **FAQ About Hypnotherapy in London**

How much does hypnotherapy cost in London? Prices vary between practitioners and clinics across the city, often depending on location, experience and session length. Hypnotherapy 4 Freedom offers a free 30 minute consultation before any paid session, so cost and a realistic session plan can be discussed openly before committing to anything. Sessions are progress led rather than sold as a fixed package, so the total number needed depends on the individual issue being addressed.

Is hypnotherapy available on the NHS? Hypnotherapy is generally treated as a complementary therapy rather than a standard NHS treatment, so most people access it privately. Hypnotherapy 4 Freedom, based at 1 Harley Street, works alongside a client's existing GP or specialist care rather than replacing it. Anyone already under NHS care for a mental health condition is encouraged to keep that relationship in place while exploring hypnotherapy as additional support.

What conditions can hypnotherapy treat? Hypnotherapy is commonly used for anxiety, stress, sleep problems, phobias, stopping smoking and other habits, and building confidence, among other issues. At Hypnotherapy 4 Freedom, sessions also cover more specialist areas such as OCD, PTSD and trauma, addiction, and weight management, drawing on clinical hypnotherapy, NLP and EMDR depending on what the individual client needs. A free consultation call is the best way to discuss whether a specific issue is a good fit for this kind of work.

Is hypnosis safe? Hypnosis is generally considered safe when carried out by a properly trained and insured practitioner. Stuart Downing at Hypnotherapy 4 Freedom is a Clinical Hypnotherapist and Master Practitioner of NLP with full professional indemnity insurance, working from a private consulting room on Harley Street. Clients remain aware and in control throughout a session, contrary to the loss of control often portrayed in stage hypnosis.

Who is not suitable for hypnotherapy? Hypnotherapy is not usually recommended for people experiencing active psychosis or certain severe mental health conditions without medical oversight. Hypnotherapy 4 Freedom's free 30 minute consultation is used partly to screen for this, ensuring hypnotherapy is a suitable and safe option before any paid session is booked at the Harley Street clinic. Where it is not suitable, clients are pointed toward more appropriate support instead.

What are the disadvantages of hypnotherapy? Hypnotherapy is not a guaranteed quick fix, and results depend on the individual, the issue being addressed, and how many sessions are genuinely needed. Hypnotherapy 4 Freedom is upfront about this during the free consultation, setting realistic expectations rather than promising a fixed outcome from a single session. Sessions are reviewed for progress along the way, so the approach can be adjusted rather than locking a client into a package that is not working.

Can hypnotherapy help with weight loss? Hypnotherapy for weight loss typically works by addressing the underlying habits and emotional triggers behind eating patterns, rather than functioning as a diet plan on its own. At Hypnotherapy 4 Freedom, weight related sessions combine hypnotherapy with coaching techniques to help build sustainable change over a course of Harley Street based sessions. Results vary between individuals depending on the specific pattern involved.

Can hypnotherapy help with overthinking? Hypnotherapy can help calm the kind of repetitive, anxious mental chatter often described as overthinking by working directly on the nervous system's stress response. Hypnotherapy 4 Freedom's approach in London combines clinical hypnotherapy with NLP techniques aimed at interrupting these automatic thought patterns rather than only addressing the surface level worry. Many clients booking anxiety focused sessions describe overthinking as one of their main concerns.

What can hypnosis not do? Hypnosis cannot make someone act against their own will, erase memories, or cure a physical medical condition on its own. Hypnotherapy 4 Freedom is clear about this during every free consultation, positioning hypnotherapy as complementary support that works alongside a client's own motivation and, where relevant, alongside existing medical care rather than replacing it. Being upfront about these limits is part of setting honest expectations from the first phone call.

Do doctors recommend hypnotherapy? A number of doctors and health professionals recognise hypnotherapy as a useful complementary option for specific issues such as anxiety, IBS and habit change, alongside conventional treatment. Hypnotherapy 4 Freedom encourages clients to keep working with their GP or specialist throughout, and Stuart Downing's training includes EMDR and clinical hypnotherapy specifically suited to working alongside other forms of care. It is not typically positioned as a first line medical treatment on its own.

Which is better, CBT or hypnotherapy? Neither approach is universally better, since CBT and

hypnotherapy work in different ways and suit different people and different issues. Hypnotherapy 4 Freedom's blended approach, combining clinical hypnotherapy with NLP and coaching techniques, is designed to be tailored to the individual rather than applying one fixed method to every client walking through the Harley Street clinic's door. Some clients benefit from combining structured talking therapy with hypnotherapy rather than choosing only one. Why is hypnotherapy sometimes viewed with scepticism? Hypnotherapy's association with theatrical stage hypnosis has left many people unsure what a genuine clinical session actually involves. Hypnotherapy 4 Freedom addresses this directly during the free consultation, explaining clearly what a session at 1 Harley Street actually looks like, a calm, guided conversation rather than anything resembling a stage act. Clients remain fully aware and in control throughout, which tends to surprise people expecting something quite different.
