Outcome	Standard Payout	Description
Win	1.95 x to 2.0 x	The player's choice beats the opponent's option.
Connect/ Draw	1.0 x (Refund)	Both players select the exact same item; stakes are returned.
Tie Side Bet	8.0 x to 12.0 x	A devoted side wager predicting that the round will end in a tie.
Loss	0x	The player's choice is beat by the opponent.

Strategies for Playing Rock Paper Scissors genuine Money

Although Rock Paper Scissors seems a game of pure possibility, behavioral psychologists and game theorists have studied human tendencies in this game for decades. While a computer RNG operates on rigorous mathematical randomness, playing against human challengers or automated bots programmed with human-like tendencies permits strategic thinking.

Here are a few tested strategies to bear in mind:

- **The Winning Stay, Losing Switch Rule:** Human psychology determines that when individuals win a round, they tend to throw the very same product once again. When they lose, they tend to change to the item that would have beaten their previous opponent. Anticipating this shift can give a sharp gamer the advantage.
- **Prevent Overusing Rock:** Beginners statistically select "Rock" more frequently than Paper or Scissors because of the psychological weight of the name. Savvy gamers understand this and frequently counter with Paper.
- **Bankroll Management:** Because rounds take place so quickly, it is simple to lose track of money and time. Setting strict loss limitations and session timeframes is essential.
