When human beings are asked to toss a gesture with no previous context, specific options appear more regularly than others:

- **Rock** is the most frequently tossed initial gesture since it feels physically effective and protective.
- **Paper** is the least common preliminary toss.

Smart bettors frequently open a match with **Paper** versus unknown challengers, taking advantage of the high possibility that the challenger will open with Rock.

3. Avoiding Predictability (Game Theory Optimal)

Against advanced challengers, counting on psychological quirks can backfire if they are evaluating your relocations. In Game Theory Optimal (GTO) play, the ultimate method is **total randomness**.

If a player picks Rock, Paper, and Scissors with precise 33.3% frequency over an extended period, no challenger can gain a mathematical edge versus them.
